DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-2 and 4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 1 and 2 include the limitation that the gas (A) is organometallic compound-free gas. However, the examiner notes that there was no clear recitation of the gas being organometallic compound-free in the original disclosure and as such, the newly added limitation is new matter.

Claims 1-2 and 4 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for treating the substrate surface with the atmospheric plasma, does not reasonably provide enablement for doing so without forming any layer on said surface. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to obtain the invention commensurate in scope with these claims.

For example, it is well known in the art that even when a substrate is placed in an ambient gas environment, especially applicants' plasma gas, gas molecules, etc. will

contact the substrate surface corresponding to a "layer". As the applicants have not provided in their specification any discussion regarding cleaning the substrate surface, etc. after surface treatment, the examiner notes that one of ordinary skill would expect the molecules to still be present and therefore, a layer to be present. For the above reasons, the applicants' disclosure does not provide enablement for their gas treatment not forming a layer on said substrate as claimed in claims 1 and 2.

Due to claim 4 being dependent on claim 2 as rejected above, claim 4 is also rejected.

Response to Arguments

Applicant's arguments filed March 6, 2009 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
